# Apps and Traps for April, 2017 by David Whitby

## Humor

Who is more afraid?

The importance of a Backup!!!

"Romeo and Juliet met online in a chat room. But their relationship ended tragically when Juliet's hard drive died."

Texting a Story....

"Get into bed and I'll text you a story."

OSX

How to Find your Folder Location in the Finder... by Chris Hauk

http://www.mactrast.com/2017/04/find-folder-location-finder-mac/

Have you ever gotten lost while browsing 12 folders deep on your hard drive in a Finder window on your Mac? Here's quick way to tell exactly where in the directory you actually are.

Magnet

From the App store.. $.99

Bring one of the best Windows features to the Mac OS.

Window Placement Options

Dashlane

https://www.dashlane.com

Keeping track of passwords and making them secure is startlingly simple with Dashlane's **free password manager**. Automatically import your passwords from into your secure **password vault**. Save any missing passwords as you browse. Make a new password right within your browser. Get automatic alerts when websites get breached.

And with our auto-login, you will never have to type any password on any of your devices again. It's that simple.

Analysts are speculating about Apple buying Disney: 'A tech/media juggernaut like no other'

http://www.businessinsider.com/rbc-analysts-speculate-apple-acquiring-disney-2017-4

TunnelBear

https://www.tunnelbear.com

In the wake of the recent legislation past that allows your ISP to SELL all your internet activity WITHOUT your permission, I have decided to increase the protection of my privacy.

APFS killer Features... by Robin Harris

http://www.zdnet.com/article/the-apple-file-systems-killer-feature-clones-and-snapshots/

Chris will cover some of this during his presentation, on 10.3 but in a nutshell...

Apple's APFS is already on millions of iOS devices - it's on a couple of mine - but it's invisible to users. By the time it ships on Mac OS later this year, it will have thousands of user-years of experience.
APFS replaces the hoary HFS+ - a relic with roots in the 1980s - and offers a laundry list of 21st century features, such as

- **64-bit inodes.** Supports over 9 quintillion files on a single volume.
- **Sparse file support.** Handles file empty space more efficiently.
- **Nanosecond time stamps.** Improves sorting of file updates.
- **Atomic Safe-Save.** Eliminates partial write corruption.
- **Clones and snapshots.** Time Machine on steroids.

Non Apple but Interesting Tech

NanoLeaf Aurora
